

## JAYPEE Launches New Products

**J**JAYPEE India Ltd is the largest manufacturer of Jaymac range of bar bending and bar cutting machines. Being a one stop solution provider for construction engineering industry, the company has recently introduced Bar De-coiling and Scrap straightening machines in the market.

With over 28 years of expertise, it understands the challenges in the manufacturing process and the opportunities to improve productivity. Today, JAYPEE is one of the renowned manufacturers, exporters and importer of wide range of construction machineries and allied products. Its range of products in Rebar processing equipments are Bar Bending Machines, Bar Shearing Machines, Bar De-coiling and Straightening Machine, Scrap Bar Straightening Machine, Portable Cutting Machine, Radius Bending Machine, Manual Stirrup Bending Machine, Spiral Bender. Besides, Batch Mix Plant, Concrete Mixer, Mini Dumper, Walk Behind Vibratory

Roller, Tower Crane, Passenger Hoist, etc include our product range in Concrete processing and Material handling equipment. Using CNC Jig Boring Machines, CNC Milling Machines and numerous hi-tech machine tools has helped to achieve the desired production requirement alongside of keeping the quality at par with International standards, says the company.

The JAYPEE's recent offerings- Bar De-coiling and Scrap straightening machines have received tremendous response from the market. Both the machines are material saving by minimizing wastage. As a result of which they have provided the industry with substantial savings not only for their company but also for the economy by reducing the wastage of steel at site.

Jaymac Automatic steel bar de-coiling straightening and cutting machine is an innovative design for straightening round steel, hot and cold rolled rebar steel, ribbed steel

and thread screw steel. Used in building construction, steel rolling machines the automatic machine has high traction speed, straightening stability and cutting for working in a better, safe, and continuous output.

JAYPEE Batching Plants are

designed to give the maximum efficiency output by way of reducing the batch time. Each batch is systematically controlled and practically approached to give the user the most efficient use of the equipment. Use of state-of-the-art Control Panel gives the machine constant support for long working hours and reduces wear and tear of mechanical parts.
